

## Flexible Marine Tanks – Diesel Fuel

Covertex Flexible Marine Tanks are the ideal way to store additional fuel for extended voyages, with options including on deck bulwark or free standing tanks to cavity or containerised tanks.

Custom designed to fit your requirements and with over 20 years of experience the robust polyurethane fuel grade material and construction delivers performance you can rely on.

### Bulwark Tanks:

Designed to be placed on deck walkways the Bulwark Tank utilising the vessels superstructure and bulwark sides to provide the tanks structural side support with a specially developed tank end construction to counter end loads. Each tank is custom designed to suit the space available.

### Free Standing Tanks:

Designed to be placed on the deck of a vessel and secured in place with lashing the Free Standing Tank is self-supported and includes a continuous perimeter webbing attachment detail providing multiple securing points. Tanks are available in a range of standard sizes or can be customised to suit the area available.

### Cavity or Containerised Tanks:

Designed to create fluid storage utilising the structural support provided by existing cavities or holds, or alternatively purpose built boxes and containers. Each tank is customised to suit the cavity or containers internal dimensions.

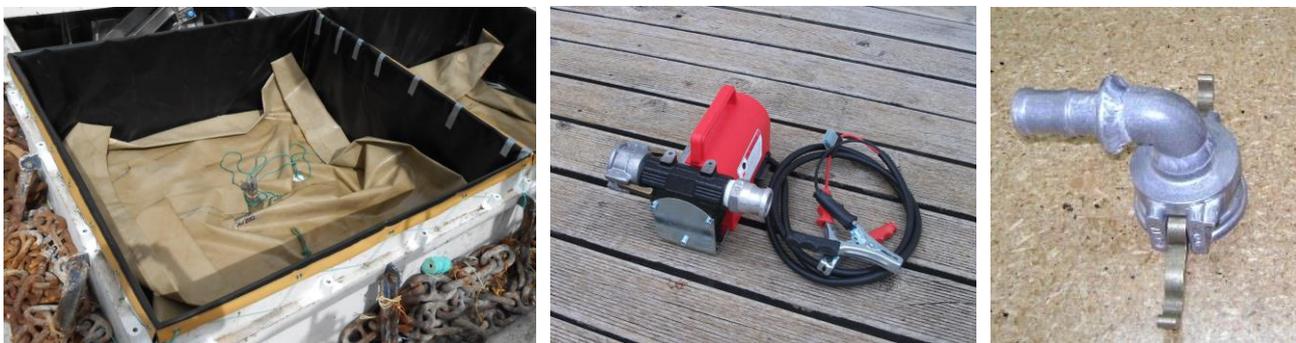

### Fittings:

As standard each flexible tank is supplied with 1 x 1.5"/40mm inlet/outlet flange fitting with screw cap; however optional fittings and sizes to suit the customer's requirements are available including ball valves, camlock/storz couplings, vents or pressure relief valves.

### Accessories:

A range of accessories are also available including cavity/container secondary liners, fill/discharge fittings, hose sets, fluid pumps, webbing harnesses and carry/storage valises.

### Offloading:

It is recommended that all discharge/offloading of flexible fuel tanks is carried out via fuel pump.
