

WINEPRESS MEMBRANES

Covertex has forged a reputation for delivering trusted performance when it matters.

As experts in technical fabric engineering, we work across many industries, from Wineries to Medical and Military applications. Our same uncompromising approach to quality is applied to every product that bears the Covertex name.

For more than 20 years we have serviced existing and supplied replacement pneumatic winepress membranes for numerous leading wineries throughout New Zealand.

As a locally owned and operated company, we provide unparalleled service to our customers. Repairs and replacements are manufactured and delivered quickly, as we understand how costly machine downtime can be.

All our replacement membranes are backed with a two year warranty.

DESIGN

We hold an extensive database of membrane designs suitable for a range of pneumatic press brands including; Bucher, Diemme, Howard, Velo & Willmes, so there is a good chance we've got yours already. If not, we can measure and record your membrane so there's no need to remove it more than once.

MANUFACTURE

We use 1250gsm polyester-reinforced polyurethane. Developed in Europe, it is purpose designed for winepress applications. We then hi-frequency weld the material to ISO 9002 quality standards. Therefore you can be sure our membranes are made to last.

MAINTENANCE

We offer a comprehensive inhouse inspection service. This enables us to advise on the condition of your existing membrane, make repairs where necessary, and add your membrane's specifications to our database, avoiding costly delays in the event of a replacement being required.

To arrange a membrane inspection, or to order a replacement membrane
